

## **Stine Bjørn Gram, MD, PhD**

Stine is a medical doctor currently specializing in Clinical Genetics. She has conducted several years of research on palmoplantar keratoderma at Odense University Hospital, Denmark, where her PhD focused on establishing a large national cohort of affected families and investigating the underlying genetic causes.

She is an active member of international collaborations, including the European Reference Network for Rare Skin Diseases, as well as national Danish networks for healthcare professionals working with genetic skin conditions.

Stine is an early-career researcher with several scientific publications and a strong research interest in hereditary skin disorders. She has also previously collaborated with Danish podiatrists, including presenting at the Danish Symposium for Podiatry in 2024 and interviewed for the Danish podiatry magazine.
